

## ***Our 10 CARD PROGRAM*** ***Office of Dr. David C. Kolbaba & Associates***

### ***Make Your Reservations Now!***

Typically, when a person is in pain or discomfort, as a last resort, they go to the doctor for help. It's relatively easy to set an appointment when leveraged by pain or suffering. Most of our patients begin their care with us because of unwanted pain. The inconvenience associated with taking time off of work to see the doctor is expected and endured by the patient, because of their crisis situation. Simply put, the motivation is pain. The price is paid in added stress to you, the patient and the scheduling staff at the doctor's office.

**Our goal is to care for you without having to rely on pain and dysfunction.** We want to motivate your continued care through a more preventative approach. A series of treatments over time can help you understand and appreciate your effective treatment plan.

**First by reducing your pain,  
Second and probably most important,  
helping you get to the point you can say "Wow, I feel great!"**

There is a big difference between being "pain free" and feeling "truly healthy" because you've reached a higher state of health. We want you to reach that "healthy state" and to feel the effect of it. But, *convenience* not *pain* is the answer. This is where our advanced appointment plan comes in;

### ***Our 10 CARD PROGRAM***

**Schedule 10 of your upcoming appointments in advance, and get the optimal appointment time/day for you.** It's a great time saver for you and us. It reduces stress and it works so much better than getting "left over" time, as you check out each visit.

#### ***All we ask is that:***

1. If any change to your schedule of care is needed, once reserved, make it as soon as possible. This allows for us to give your appointment time to someone else in need.
2. You make-up your appointment over that same treatment week. This helps maintain your progress.

Can you imagine what your life will be like in your distant future, learning and sustaining reliable health practices that have been formed out of a greater sense of health, not sickness?

***Work from a position of vitality, not chronic weakness or premature aging.***
