

Bone Healthy Scan

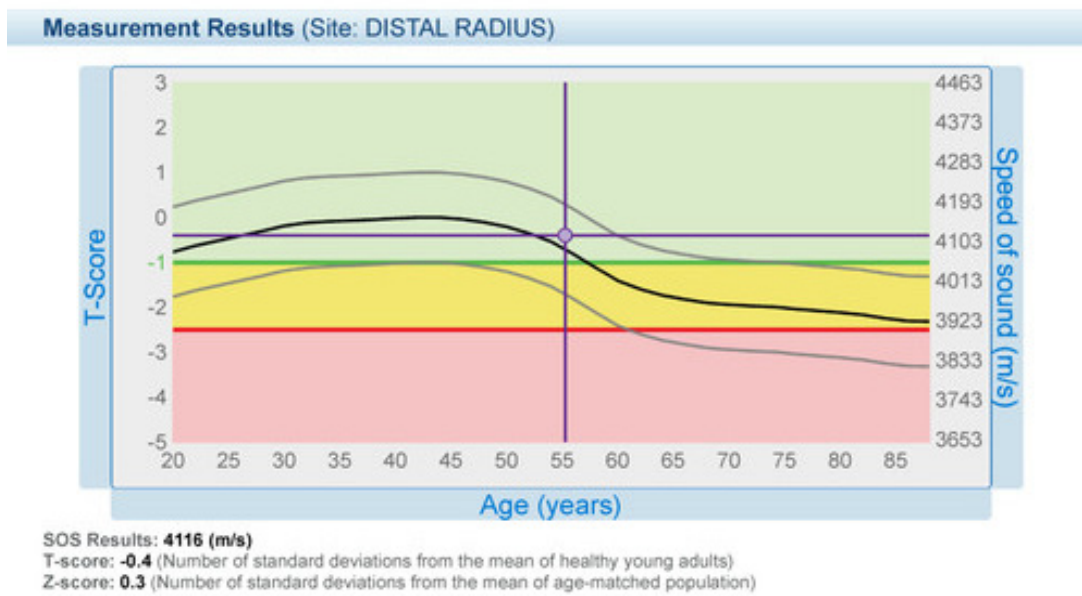

Beam Med Sunlight Mini Omni Portable Bone Density Machine

- **Bone Healthy Scan** is an affordable and radiation-free alternative to a DEXA scan that uses quantitative ultrasound to gain a measure of skeletal fragility. This can assist in diagnosing and monitoring osteopenia and osteoporosis.
- Evaluate the risk for osteoporosis or fractures - accurately, quickly, and with maximum patient convenience.
- Bone is living tissue made of many elements besides calcium and is important to evaluate every year, as it is a predictor of how long you are going to live.
- The goal of progressive testing such as **Bone Healthy Scan** is to get the bones healthy and keep them healthy.

- Real-time visual and audio feedback of correct measurement

- **Bone Healthy Scan** calculates Z score and T score, which can diagnosis osteopenia, osteoporosis, and other medical conditions leading to reduced bone strength, resulting in increased fracture risk.
- Physicians use bone density tests to help them give proper guidance to their patients, along with the consideration of a variety of clinical risk factors including (sex, age, height, weight, previous fractures, hip fractures, smoking habits, and associated conditions such as rheumatoid arthritis and alcohol consumption).
- After completing the **Bone Healthy Scan**, a comprehensive plan will be given to take the mystery out of what exactly to do for bone health.

*Get your **Bone Healthy Scan** today and start your journey to better bone health!*
